

Differential Release Liners

by [Carl Nelson](#) (March 2019)

Ambroise Vollard, Paul Cézanne, 1899

(With a thank you to freelance author, Kathy Des Marteau)

How often the most obscure articles*
swing on the same hinges as our lives!
Differential release liners are used as
“anti-adhesives” for the successful assembly
and application of such products as rolls of
tape and window decals, allowing a
proficient transfer of adhesive from
its point of production to its point of use.
Oh, that I could wrap some around my son!

Transporting him safely through a gaggle
of corrupting youths before releasing
him to adhere to a more noble assembly
of future citizenry with laudable goals and
ambitions, and most importantly, frontal lobes
still operant and not addled by alcohol nor drugs.

And then, also to slip him though the many
alluring denizens of inappropriate

heterosexual assignations with
their throw away, aborted or latch-key children,
and then possibly through transient, trans-gender
apperceptions
without fear of “adhesive confusion”, with its
compulsory sexual re-assignment surgeries.

To be finally, with the proper courting
procedures completed, to have his bride to be
remove the paper backing as the vows
are taken—to watch them adhere. (Oh, I blush.)
