

# ISKP terrorists in Afghanistan said to claim rocket attack on Uzbekistan

From [bne intelnews](#)

A regional affiliate of Islamic State on April 18 reportedly said it had carried out a rocket attack on Uzbekistan from neighbouring Afghanistan. If confirmed, it would be the first strike by the terrorist group against the Central Asian nation. *It is [SITE Intelligence](#) who have the ISKP video and they are pretty reliable.*

Islamic State Khorasan Province (ISKP) fired 10 rockets at an Uzbek military base in the border town of Termez, the group said in a statement, according to Site Intelligence, which tracks terrorist

propaganda.

Uzbekistan's presidential press secretary Sherzod Asadov denied there had been a rocket attack, saying: "The information spread by some Telegram [social media] channels about alleged ISKP rocket fire from the territory of Afghanistan directed at the area of Termez is absolutely fake. According to the Ministry of Defence and the Border Troops of Uzbekistan, there is no military activity on the Uzbek-Afghan border, the situation is stable. We ask you not to succumb to provocations."

The launching site for the rockets was claimed as in Hairatan, a border town in the northern Afghan province of Balkh. The

terror group purportedly released a photo and video of the projectiles on social media to back its claims.

ISKP has increased attacks around Afghanistan and in Pakistan since the departure of the US and allies after a two-decade military presence in the country. Uzbekistan in particular of the Central Asian nations has appealed to the major powers to do more to assist in helping Afghanistan's new administration build towards stability and economic development.

The group has carried out several attacks in neighbouring Pakistan. They included the deadly suicide bombing of a Shiite mosque in the northwestern city of Peshawar last month. The attack killed more than 60 worshippers. Pakistani authorities said the bomber was an Afghan refugee who had received training in Afghanistan.
