

# Mohammed Abu Salha Specializes In Mood Disorders

[He's a psychiatrist.](#) He treats patients with mood disorders, depression, and so on. So one might think he would be fully aware of what ails people such as Mr. Hicks. He might be curious to learn about what other neighbors said about Hicks, or what Hicks himself displayed on Facebook about his own views of the universe.

But Mohammed Abu Salha (Medicaid accepted) insisted at once that the man who shot his daughters was of course motivated by anti-Muslim hate. Why? On what evidence? And ignoring what other evidence?

Others may want to learn more about his billing practices, and with government reimbursement programs. I'll stick with what he did, and did not, learn in his training, and from his experience as a psychiatrist.
